Meetings
Please note that all Center meetings and weekly faculty meetings at agencies are mandatory. If another meeting comes up, that conflicts with these, make sure that you have prior approval of your faculty to attend.

Also, keep in mind that the time of your organization liaisons is valuable. The amount that they spend with all of you is directly related to the quality of your efforts. However, you are entitled to some regular contact with your liaisons that are your lifelines to your projects. Occasionally, a group will feel some pressure from the agency to go beyond the bounds of what can reasonably be accomplished in seven weeks. If such is the case with your team, enlist the help of your advisors early to negotiate with the agency a way to contain the project.

Grading Policy
Faculty advisors will explain the grading policy to you, but you should expect that your liaison’s expectations are sometimes different from your advisors. Therefore, even if you satisfy your sponsor, faculty may still have other expectations regarding the academic aspects of the experience.

Required Books and Other Materials
Bring your A-Term books, articles collected during proposal preparation, and other appropriate project-related references. A writing manual will be very useful.

Weekly Schedule of Activities

<table>
<thead>
<tr>
<th>Week 1</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Saturday 10/25</td>
<td>Housing available for check-in after 2 p.m.</td>
</tr>
<tr>
<td>Sunday</td>
<td>Orientation meeting with the faculty advisor: the advisor will post the place and time, or you may receive a memo. The purpose of the meeting is for the advisors and you to exchange information that will make the first week a smooth one. Your advisor will present some valuable pointers about the resources on Nantucket and how to get access to them. The advisor will also go over the schedule for the week, including the time for the next meeting, appoint CONTACTS, and explain his/her expectations for the practice presentations. Faculty will suggest a schedule for weekly meetings at agencies.</td>
</tr>
<tr>
<td>Monday</td>
<td>Each student project group will meet with its liaison at the agency promptly at 9:00 a.m. or earlier. The projects officially start at that time. Take detailed notes. Identify information resources, including how to gain access to the agency library, for example. Ask for a regular weekly meeting time with the liaison. Team, advisor, and liaison meetings may be held this week at the agency. Generally, this meeting is an informal meeting designed to make sure everyone agrees on the direction and content of the project.</td>
</tr>
</tbody>
</table>
Evening meetings with students and faculty: faculty will announce the time. Often, there are minor problems to discuss or questions to ask.

* Week 5 is the Thanksgiving vacation week. You are allowed to leave the island on Friday (11/21) afternoon after work. However, your team has an assignment due by Sunday (11/23) at 6pm. Also please note that all departure dates must be confirmed with your advisor.

**For general report writing:**

- You should be writing all the time, regardless of due dates.
- References lists should be continually updated as background material is added and methodologies are finalized.
- Table of Contents, List of Figures, List of Tables, and section/page numbering should be continually updated.

Your project is a dynamic experience and hence the report is a dynamic document that evolves with your progress. Staying on top of the writing will not only help your thinking but will save you time and frustration during the last week of the term.
Guidelines for Final Report

Due to the heavy workloads that will be experienced during the term, certain procedures have been adopted to facilitate your efforts.

1. Everything submitted to the faculty advisor must be electronically submitted or on 8 ½ x 11 paper and either stapled or punched with three holes and put in a loose-leaf binder.

2. Everything submitted must be dated and initialed and must have been the name of the project and students on it. All drafts of chapters must be typed. No handwritten drafts will be accepted.

3. A Task Chart for the entire term project, written by the project team jointly, is to be submitted at the first weekly meeting with the faculty advisor.

4. At the weekly organization meeting with the faculty advisor, each team will submit a:
   a. Proposed Work Plan identifying major tasks to be done in the next week by the group.
   b. Summary Progress Chart briefly indicating the team’s overall fulfillment of its progress on the project.

C. 

* This page is required for all group projects. It identifies which student holds primary responsibility for each section of the report.
Format for Letter of Transmittal

(Business letter format, written to agency liaison)

The Letter of Transmittal is a letter formally submitting the project report to the agency involved. A sample letter of transmittal is given below. The letter must contain the title of the report and include the following sentences:

“Copies of this report are being submitted simultaneously to (faculty advisors) for evaluation”.

“Upon faculty review, the original will be catalogued in the Gordon Library of Worcester Polytechnic Institute”.

The letter should close with a statement that thanks the liaison for his or her help.

(Sample Letter)

date of letter

Mr. Louis C. Rogers, Director
Office of Environment
U.S. Fish and Wildlife Service
Washington, DC 00901

Dear Mr. Rogers:

Enclosed is our report entitled The Impact of the Fisheries Industry on Coastal Waters. It was written at the U.S. Fish and Wildlife Service during the period August 26 through October 12, 1990. Preliminary work was completed in Worcester, Massachusetts, prior to our arrival in Puerto Rico. Copies of this report are simultaneously being submitted to Prof. Susan Vernon-Gerstenfeld and Professors Rivera and Demetry for evaluation. Upon faculty review, the original copy of this report will be catalogued in the Gordon Library at Worcester Polytechnic Institute. We appreciate the time that you and Mr. David Langston have devoted to us.

Sincerely,
REPORT TITLE IN CAPITAL LETTERS

Abstract
The Abstract is of prime importance since it is used by readers for guidance about the subject, treatment and results. Often the quality of the Abstract will determine how much attention a decision-maker will devote to the rest of the report. Therefore, the Abstract must summarize the contents briefly and accurately, and be understandable independent of the text. It should contain no equations; figures or illustrations and you should aim for no more than 80 words. The Abstract must contain the name of the organization with which you worked. It might begin, for example: “This report, prepared for the U.S. Department of Commerce...”. The Abstract must be single-spaced. This abstract, unless revised by the faculty advisors, will appear on your transcript.

Authorship Page
When a single, comprehensive written report is submitted for a project, each individual's contribution to the group effort must be clearly identified. The authorship page is either a simple list of individual chapters and their respective authors or is a statement in which each contributing group member is named as having carried out one or more specific tasks within the overall project effort.

Acknowledgments
Students often insert an acknowledgment page if they wish to specifically acknowledge the assistance or involvement of particular people, such as liaisons or advisors.

Table of Contents
You should develop the Table of Contents early in the formulation of the report. It can serve as the basic outline of the paper.

Executive Summary
An executive summary is an extended abstract. It concisely and completely summarizes the entire project in 3-5 pages. It contains: an introduction (including problem statement and project objectives); a description of the major methodologies used; the main results and analyses; and the major conclusions and recommendations.

Very often it is the only part of the report that is read. This includes your sponsors. If you are interested in submitting your project for the President’s IQP Competition, you should know that the only document used during the first round of vetting is the executive summary.

Introduction
The Introduction should contain a section on the significance of the subject matter. It usually runs about 4 to 5 pages in length and describes in general terms what the reader will read in the body of the report. The subject, goals, purposes, importance, method, audience, and anticipated form of the results for the project should all be touched upon.

Literature Review/Background
Usually, a project topic will deal with several areas of knowledge. The literature review is a discussion of the theoretical background your topic and current and past research
performed in relevant area. It provides the reader with the information necessary to understand your topic. It also leads the reader to understand how and why you formulated the problem in the way you did. Your project is intended to fill a gap in knowledge or add to the store of knowledge in the subject area. In some cases, when a project results in a product such as a videotape, for example, the literature review created the rationale for creating the product, which, in turn, will be used as a tool for actions that in the end will develop knowledge. If your literature review does not clearly provide a rationale for your project, you have not covered your field or you have not conceptualized the problem rationally. Your literature review from your preparation should provide you with a good start. But you are expected to greatly expand your own knowledge through new literature sources and to provide the reader with many more sources. Remember, people who have no knowledge in your project area may look at your report in Gordon Library. Your literature review should enable them to understand the basics in your topic area, the rationale of your methodology, the data you discuss, and your conclusions and recommendations. Remember to focus on points not on particular authors or sources, unless they are seminal works in the field that are so commonly recognized that the name of the author or work is immediately recognized.

Follow the referencing format prescribed by your advisor.

**Methodology**

This chapter, one of the most important in the report, must present your methods of analysis in a way that will allow the reader to replicate your efforts with a different sample. The Procedure or Methodology is the general, conceptual flowchart of the problem-solving approach. You must provide a rationale for all procedures you elect. If for example, you plan to conduct interviews, you must tell why you chose to conduct unstructured versus structured interviews. If you sent out questionnaires, why did you do so? Justify the type and size of your interview sample or your questionnaire sample. Many projects do not lend themselves to quantification. However, you will discuss, for example, why you chose to do open-ended interviews, focus groups, content analysis, system dynamics modeling or document research or observation techniques or historical research or other procedures for data collection not named here. Whatever methodologies you use should be discussed in detail. You should clearly explain the rationale for your choices, including the alternate methodologies you did not choose and why. For example, how many people were involved in your focus groups and why did you choose that number and that sample? How did you train the leaders to insure uniformity across groups? How did you record the information and organize it so that you could analyze it conceptually? How did you find the documents you needed when you did document research? What were the obstacles and what compromises did you have to make regarding the data in the process of collection? These are but a few of the sorts of questions you should address.

Many projects will not require statistical analysis. However, if your project did require statistical analysis, why did you choose one statistical procedure over another? What were the difficulties in choosing your sample? How did you pre-test your interview
questions or your questionnaire? What were the time, money, geographic and human resource constraints? If you did not choose a random sample, why didn’t you? If you stratified your sample, why did you stratify it that way?
In conducting your work, you may have had to modify the procedures you first intended to use. Explain what modifications you made and why. Hunches, even based on interviews, cannot be reported unless they are backed by data that has been analyzed systematically, if not statistically. Systematic analysis requires organizing data according to criteria set up in advance. Usually systematic analysis means numbers are involved.

**Results and Analysis**

This chapter contains the presentation, discussion and analysis of the findings of your investigations. Start with the simplest material, but be specific. Your reporting and any arguments you make will be infinitely stronger if you use, whenever possible, tabulations of the findings. An example is, “Six out of twenty people interviewed wanted the airport to be transferred to private ownership”. Proceed to more complicated reporting. “In spite of the fact that so few people were in favor of private ownership, the majority - 18 out of 20 - felt that private ownership would result in more efficient service for passengers”. However, not all projects will lend themselves to this sort of reporting. Discuss the format of the presentation with your advisor(s) early in the project.

Tables may be used when doing so **supplements** but **does not simply duplicate** the text. Refer to the table-- “Table 2 below discusses.........”-- then insert it in the text. Tell the reader what to look for in the table, but discuss only the highlights. Do not use a table to take the place of text.

Each table should be numbered and have a name. For example, the first table might be labeled as:

   Table II - 1. Engineers by Field

   (Table is inserted here)

**Readers should be able to understand the table without explanation.** Have others who are not in your team look at your tables and tell you what they mean. If the reader does not understand the table, revise it. Refer to the table by number: “High school students are more informed about the tasks of mechanical engineers than they are about those of electrical engineers (See Table II - 4)”, for example; or “Table II - 4 shows the number of manufacturing plants that ....”

Your analysis should focus on the significance of patterns you discern in your data. Hence, you will be able to say, “Seven out of the nine people indicated a preference for
Classic Coca-Cola, suggesting a trend." Or, “Since only four out of nine people believed the regulations should be changed, we cannot justify a recommendation to change the regulations. Nevertheless, our sample was so small that we cannot conclusively state that our findings constitute an adequate picture of the opinions of the total population from which the sample was drawn”.

Remember that your samples will not be large enough to allow you to make statements about cause and effect. In order to do so, you would have had to use a classic experimental design in which you controlled for all variables except the ones you wished to test. You would, also, have had to use a large sample. Hence, while always referring back to your sample size for justification, you can talk only about trends and about their strength. Provide the reader with alternate explanations for the outcomes of your data. When the majority of adopters of solar equipment are between the ages of 30 and 50, it is not because older people do not like or believe in solar equipment as an energy saver, but because older people may have less access to media sources from which they can learn about solar equipment than younger consumers. They, also, may have lower incomes than the younger group and, therefore, cannot afford solar equipment, for example. Do not reject data you feel will not support your hypotheses or that will not please your agency. As researchers you have an obligation to report and analyze all relevant data. Finding lack of support for a theory or stating that the evidence is inconclusive is always as important as supporting theory.

Conclusions
Be sure that all your conclusions are consistent with and follow from an analysis of your data. Everything in this chapter must grow logically from what you have presented in earlier sections.

Recommendations
The chapter indicates what policy recommendations you are making. Recommendations must follow from conclusions, which follow from your analysis, which follow from your data, which follow from your methodology, which follow from your hypotheses, which follow from your discussion of background material including discussion of theories.

While recommendations grow logically from your investigation, they do not necessarily grow logically from the opinions of agency personnel or from the political climate of an agency. Upon occasion, recommendations may be contrary to what an agency may wish to hear. This is a delicate situation and will require tact on your part. Discuss controversial findings and recommendations with your liaison and advisors, but be true to your data and your analysis. Sometimes Conclusions and Recommendations are combined into one chapter.

Mission And Organization (of Agency) - Appendix A
This Appendix should include a general background statement on the history and development of the agency or organization, recent budgetary trends, how and by whom its policy is set, and a specific statement of current mission, policies, goals and
objectives. The original letter from the agency, identifying the topic, should be included as an exhibit. The final section should describe how your project topic is related to the agency's mission, the position and responsibilities of the people working with you in the agency—show an organization chart, and how the project topic's results would affect components of the organization.

References
Use the American Psychological Association Publication Manual as your guide, or a standard format provided by your advisor.

Supplementary guidelines for final report:

MARGINS - very important to observe in order to be able to bind all materials in a readable way. (Beware of 8 x 10 ½ paper). From top of page and from right-hand side: 1½ inch—to allow for room for binding. From bottom of page: 1 ¼ inch. From left-hand side: 1 ½ to 2 inches in order to leave room for binding. Nothing should appear outside these margins except the page number, which should be centered at the bottom of the page.
DOUBLE SPACE all sections of your final report, EXCEPT:

- the ABSTRACT
- indicated sections of the Title Page
- Quotations, References, Illustrations, Footnotes, and other items that are normal single-spaced.

Be consistent in footnote style. If in doubt, consult your advisor.

**Supplementary guidelines for illustrations**

- Graphs, charts, and other illustrations are normally referred to as Figures. Tables are referred to as such.

- If an illustration takes up 1/2 page or more, give it its own page. Place the illustration as closely as possible to the section of the text to which it refers.

- If a single illustration is more than 2 or 3 pages long, include it as an appendix to the report.

- If the illustration is taken from or is a modification from an outside source, credit that source.

- This sort of reference appears below the illustration. Do not use an illustration if it is not referred to in your text.

Below is an example of a table:

**Table I - 1. Fruit Grown in Massachusetts**

(Given by town in percent of total yield of fruit in state)

Copies of the Report to be submitted (If the e-project submission process is operational then paper copies will not be necessary except as specified by your advisors and liaisons)

1. ONE COPY of the report including appendices and final presentation file on CD-Rom for Center Director files (D. diBiasio, GH 127).

2. ONE PAPER COPY, CD_ROM, or e-project file submitted to the Registrar’s Office that will be sent to Gordon Library. Check with your advisors about the details of the electronic submission process.

3. ONE COPY for each faculty advisor. Check with advisors for exact form (electronic or paper).

4. ONE COPY for sponsoring agency liaison. Check with liaison for exact form (electronic or paper).

ONE COPY for each member of the project team
